GENERAL NOTES

1. Reserved riser and the distribution route. Outlets, circuits, board schedules and loads are the electrical engineer's.

2. Coordination only. No fitting, outlet, diffuser, pipe or cable is drawn, and no size, load or capacity appears. Those are the services engineer's design; a layout invented here would be thrown away, and in the meantime somebody might price it.

3. What this sheet does fix is space: the riser reserved through the building, the rooms that have to be served, and the plant position. Those are expensive to change later, which is why the architecture states them now.

4. The plan is run from the floor plan with its fittings switched off, so it cannot drift from A-104 when a partition moves.

5. Builder's work — holes, chases, upstands and bases — is to be agreed against this layout before any slab is poured.
