GENERAL NOTES

1. Layout only. No member size, no slab or footing depth, no reinforcement and no load appears on this sheet or anywhere in the STR series. Those are the structural engineer's, and a column schedule with sizes invented by an architect is worse than none, because somebody builds it.

2. The grid, the column coordinates, the spans and the slab edges are measured from the same geometry the architecture is drawn from and are exact.

3. Every column is marked by its grid intersection and stands at the coordinate printed beside it. Eight run from the foundation to +13.20; four — B2, B3, C2 and C3 — carry on to the roof over the penthouse.

4. Sections and reinforcement are the engineer's. The marks and coordinates are what this sheet issues.
