GENERAL NOTES

1. Plant on the roof, risers down, which is all the architecture fixes.

2. A diagram, not a drawing to scale, and it fixes one thing: the riser runs the full height of the building in the east strip, where the wet rooms were measured to stack on every level.

3. No size, capacity, rating or load appears. The engineer's design fills them in; this reserves the space it has to fit through.

4. The connection below ground waits on GEO-001 and the drainage design, and on whatever the authority requires at the boundary.
